➔ (Indicates Anchor Point Locations)

Anchoring Requirements: 7 Anchor Stakes

Ground Anchoring

Do Not:

The State of New Jersey requires:
38" embedment depth for the stakes.

- * Operate in winds exceeding 15 mph!
- * Operate without an attendant present!
- * Inflate Or Use This Inflatable Without First Securing To Ground . Use Stakes At All Tethering And Anchor Points.
- * Pound Stakes Into Ground Without First Verifying Gas, Water, & Electrical Locations With Local Utility Companies.
- * Operate in damp or wet environments!
- * Allow people or riders on the inflatable rides if they consumed alcohol or illicit drugs!
- * Ride or play on the inflatables if you are under medication that would impair your judgement!
- * Run to enter the inflatable rides. Starting line is 36 inches from the entry of the inflatable rides. Enter inflatable rides from a standing position only!
- * Use Silly String On Unit.

Note: Stakes are intended to keep inflatable from shifting during normal operation. They are not intended to anchor inflatable during high winds. DO NOT operate inflatable in winds above 15mph. If winds exceed 15mph during operation, evacuate and deflate immediately.

The 14ft Candy Bounce Play Instruction

The 14ft Candy Bounce is used as a Bounce house game:

1. For normal operating, there shall be an operator at the entrance controlling access to the ride and assisting patrons off.
2. Riders are to enter the unit by climbing the front entrance ramp and enter under the entrance/exit door. Once inside, the riders can bounce around on the mattress. Make sure all riders follow the safety rules while inside the bouncer, do not overload the bouncer, only the designated number of riders are allowed in the bouncer at one time.
3. Do not allow anyone to jump on the entrance step.
4. Do not climbing of the walls or nettings.
5. Do not allow a new set of customers to enter the ride until the previous group has exited. Use common sense to keep the ride operating as a safe environment for the customers.
6. The following evacuation instructions should be followed in case of power failure:
 - 6.1 Stop patrons from entering the ride, including parents
 - 6.2 Riders in the bounce area shall be told to leave through the entrance in an orderly manner. There is no need to rush, there is plenty of time and rushing may intimidate smaller and more timid riders.
 - 6.3 It takes close to two minutes before the ride starts to sag noticeably, and evacuation of this device should take no more than 30-45 seconds.
 - 6.4 Do not allow anyone to enter the device until it is properly re-inflated and the power supply is stabilized

Important Information:

1. Waiting riders should stand at least 3ft (1m) from the entrance of the ride.
2. Running to enter the ride is not permitted.
3. Enter the ride head first is only allowed from a standing position
4. One rider per ride entry location is allowed to enter the ride at a time.
5. Do not allow the riders to stand up and run off the ride.
6. Do not allow somersaults or back flips anywhere on the ride.
7. Do not wear shoes on the ride. Remove any hard or sharp objects such as pens, buckles, jewelry, hair clips, etc. Glasses are best removed also.
8. No gum or wearing face paint allowed.
9. Do not allow riders to deliberately collide with one another.
10. At least one adult operator shall be on duty at all times the unit is being used
11. Please refer to the safety label on the ride for the minimum Height and Max weight requirements.
12. Make sure there always be same age group or height group play the ride at one time, mix up group is dangerous.
13. If the ride becomes wet, dry the wet area before continuing use.
14. If the power fails, assist the riders off the ride immediately and do not allow them to re-enter until power is restored and the ride is fully inflated again.

IMPORTANT NOTE: If the fan is restarted following power failure, or accidental switching off, be sure to verify that the fan is running correctly. If the flapper valve does not close properly, or is missing, the deflation of the ride may cause the fan to spin in the opposite direction when restarted. If this happens, the blower will not inflate the ride properly.
